Assignment 1

You are implementing an email app. Design two layouts for two different activities:

1. email composition layout
2. email reading/previewing layout

Email composition should allow entering of the following fields:

- from
- to
- cc
- bcc
- subject
- email body

It should also feature two buttons: “Clear” & “Preview”. Under these two buttons you have to place your name as “Developed by Your Name”.

Email reading/previewing layout should feature exactly the same fields but for only display, not editing. 'bcc' field should be missing though. The 'email reading/previewing' layout should feature two buttons, *i.e.* "Edit Email" and “Send Email”.

Feel free to use your favourite type of layout for this, *i.e.* table, linear, or relative.

Once you are done, create two activities (one for each layout) and make your application do the following.

1. Your application should start in email composition/editing activity:
    1. user should be allowed to enter information in the above fields
    2. pressing 'Clear' button should clear the information in all the fields
    3. pressing 'Preview' button should create an intent to call a second activity, *i.e.* Reading/Previewing Email where you can read/preview the composed email before sending it.
2. Email Reading/Preview activity should be started by explicit intent from composition/editing activity:
    1. user should be able to see the whole email (so make sure the view is scrollable)
    2. pressing 'Edit Email' button should take user back to the email composition/editing activity
    3. To get Top marks, you need to add “Send Button” on the email preview activity page (Email reading activity) and by clicking this button the program should be actually able to send email. (last 10%)
3. VERY IMPORTANT! Your application should preserve all the input data! If your activity stopped and restarted again, all entered user data should be preserved in it!

Submit your assignment as a single .zip or .tgz file.

You must record a short 1-2 minute tour of your app & code to add the grading.
